# **Globe Valves**

# Bellows-type Globe Valves to DIN/EN

# **NORI 40 ZXLB/ZXSB**

# Main applications

- Process engineering
- · Chemical industry
- Petrochemical industry
- Sugar industry
- Heat recovery systems
- Boiler feed applications
- Nuclear power stations

# Fluids handled

- Water
- Steam
- Thermal oil
- Other non-aggressive fluids such as gas or oil on request.

# Operating data

Table 1: Operating properties

Characteristic	Value
Nominal pressure	PN 25/40
Nominal size	DN 10 - 200
Max. permissible pressure [bar]	40
Min. permissible temperature [°C]	≥ -10
Max. permissible temperature [°C]	≤ +450

Selection as per pressure/temperature ratings (⇒ Page 6)

# Valve body materials

Model with flanged ends, DN 10-40, and model with butt weld ends, DN 10-50

Table 2: Overview of available materials

Material	Material number	Temperature limit
P 250 GH	1.0460	≤ 450 °C

# Model with flanged ends, DN 50-200, and butt weld ends, DN 65-200

Table 3: Overview of available materials

Material	Material number	Temperature limit
GP 240 GH+N	1.0619+N	≤ 450 °C

# **Design details**

### Design

- Plug-type valve disc, replaceable
- Two-piece stem
- Back seat
- Back-up gland packing with gland follower
- Position indicator
- Outside confined cover gasket
- Materials free from non-ferrous metals
- EC type-tested (Module B), component mark TÜ.A.-209
- Exterior coating: blue, RAL 5002
- TA-Luft-compliant design to VDI 2440

# **Variants**

- · Throttling plug
- Valve disc with Gylon gasket (240 °C max.)
- Balanced plug ≥ DN 125
- Locking device
- Travel stop
- Studs and nuts made of A4-70 (low-temperature steel)
- Oil and grease free (wetted parts)
- Stellited seat/disc interface
- Seal-welded body/bonnet joint
- · Leakage detection hole
- PTFE-encapsulated gasket (max. 300 °C)
- Serrated gasket (PTFE or graphite coated)
- PTFE gland packing (300 °C max.)
- Chlorine, dry
- Upper section with single-piece non-rotating stem for mounting electric and pneumatic actuators (DIN ISO 5210)
- Electric actuators
- Pneumatic actuators
- Limit switch(es)
- Other flange designs

- Other butt weld end versions
- Other socket weld end versions
- Inspections to technical codes such as TRD/TRB/AD2000 German Steam Boiler / Pressure Vessel Regulations – or to customer specification

### **Product benefits**

- High functional reliability and long service life
  - Two-piece stem. Burnished, non-rotating lower stem makes for minimal wear and long service life of the gland packing.
  - Hard-faced valve seat made of wear and corrosionresistant materials.
- Leak-proof and easy to service. The double-walled bellows is welded to the stem at the lower end, and to the intermediate piece at the upper end. No vibrations transmitted from valve disc to bellows. Valve disc and bellows assembly inexpensive to replace.
- Reliable sealing. Bonnet gasket fully confined to prevent creep.
- Additional stem seal for emergency operation and blowout protection by standard back seat as well as back-up gland packing made of pure graphite.
- Reliable shut-off due to tapered valve disc with angled seat/disc interface. Can also be used for contaminated fluids thanks to self-cleaning properties.
- Easy to repair due to corrosion-protected bolts/screws and nuts

### **Product information**

# Product information as per Regulation No. 1907/2006 (REACH)

For information as per European chemicals regulation (EC) No. 1907/2006 (REACH) see https://www.ksb.com/en-global/company/corporate-responsibility/reach.

# Product information as per Directive 2014/34/EU (ATEX)

The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zone 2+22) to ATEX 2014/34/511

# Product information as per Pressure Equipment Directive 2014/68/EU (PED)

The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 2014/68/EU (PED) for fluids in Groups 1 and 2.

# Product information as per UK Equipment and Protective Systems Intended for Use in Potentially Explosive Atmospheres Regulations 2016

The valves do not have a potential internal source of ignition and can be used in accordance with the UK's Equipment and Protective Systems Intended for Use in Potentially Explosive Atmospheres Regulations 2016 in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zone 2+22).

# Product information as per UK Pressure Equipment (Safety) Regulations 2016

The valves satisfy the safety requirements of the UK Pressure Equipment (Safety) Regulations 2016 (PER) for fluids in Groups 1 and 2.

Vertical clearance for removal

# Installation instructions

Install shut-off globe valves in such a way that the fluid enters the valve beneath the valve disc and flows out above the valve disc. Installation in piping with alternating flow is also possible.

If the max. permissible differential pressures for shut-off are exceeded for valves from DN 125 to 200, a balanced plug design is required. In this case the valve must be installed in such a way that the pressure to be sealed off lies above the valve disc.

The balanced plug works on the bypass principle and can only serve its purpose if backpressure builds up after opening, so that the max. permissible differential pressures for shut-off (see table) are not exceeded.

Table 9: Differential pressure [bar] for standard valve disc

DN	Δρ
125	33
150	21
200	14

For globe valves with throttling plug, detailed information about the operating mode is required for optimum valve selection.
